

RSCU LITTER

RAPID, SEMI-RIGID, CROSSFUNCTIONAL, ULTRALIGHT (RSCU) COMBAT EXTRACTION LITTER

The RSCU enables no-hands casualty evacuation by an individual, a team, or via Unmanned UGV. The RSCU is our patented casualty extraction litter designed to minimize the loss of combat effectiveness while evacuating a wounded teammate or moving material. The RSCU rolls up as tight as 6" x 8" to fit in standard issue kits. Under load and tension, it becomes semi-rigid due to the internal radial strap design, immobilizing casualties and supporting the head, neck, and spine. It is also designed for on-the-spot improvisation and modularity; RSCU allows for extraction using the entire kit or its components (litter body and drag straps).

Features:

- Made in the USA (Berry Compliant)
- Customizable and tailorable to mission needs

Design Features:

- RSCU weighs 3 pounds (less than other currently available options) and rolls up to 6" x 8" for packing.
- Capacity (by version):
 - Max 3000 pounds
 - Internal radial straps provide rigidity under load and tension
- Intuitive Design
 - 3 main "X" straps plus 3 lateral cocoon straps
 - Hands-free tow
 - One hand drag
 - Carry handle evacuation options
 - Optimized for field, aircraft, subterranean, and shipboard use
